**Top Performance.**
The AD45B underground articulated truck is designed for high production, low cost-per-ton hauling in underground mining applications.

**Reliable, Durable Operation.**
Rugged construction and easy maintenance guarantee long life with low operating costs.
Caterpillar® Brake System
Cat oil-cooled, multiple disc brakes offer exceptional, fade-resistant braking and retarding for maximum performance and productivity in all conditions. Automatic Retarder Control (ARC) optimizes braking efficiency. pg. 7

Operator’s Station
The ergonomic cab is designed for operator comfort and ease of operation allowing the operator to focus on productivity. Controls and gauges are positioned within easy reach for optimum efficiency and superior control. pg. 8

Truck Body Systems
Caterpillar truck bodies are designed as a system to achieve rated payload and provide the lowest cost-per-ton hauling system when matched with Cat Underground Mining Loaders. A variety of Caterpillar designed and built truck bodies ensure optimal performance and reliability. pg. 9

Customer Support
Caterpillar® dealers provide unmatched product support, anywhere in the world. With industry-best parts availability and a wide range of maintenance and service options, Cat dealers have what it takes to keep your mining machines productive. pg. 12

Safety
Caterpillar sets the standard when it comes to safety in the design and manufacturing of heavy equipment for the mining industry. Safety is not an afterthought at Caterpillar, but an integral part of all machine and systems designs. pg. 13
**Power Train – Engine**

*The Cat® C18 engine with ACERT™ Technology delivers the power and reliability necessary to perform in the most demanding underground mining applications.*

---

**Engine.** The Cat C18 engine with ACERT™ technology delivers higher power and greater durability for maximum hauling performance in the most demanding mining applications. Complete system integration of the engine and transmission optimizes performance and efficiency.

**Power Increase.** The 15.5% power increase over previous models provides unequalled lugging force during acceleration and less down-shifting on grade. Improved software and updates in engine technology further improve transmission shifting and decrease fuel consumption.

**Watercooled Turbocharged and ATAAC.**

Air-to-air aftercooling provides improved fuel economy by packing cooler, denser air into cylinders for more complete combustion of fuel and lower emissions.

**Electronic Unit Injection (EUI).**

The electronically controlled unit injection fuel system senses operating conditions and regulates fuel delivery for optimum fuel efficiency. The proven high-pressure fuel system provides improved response times and more efficient fuel burn with lower emissions and less smoke.

**Electronic Control Module (ECM).**

ECM utilizes advanced engine management software to monitor, control and protect the engine utilizing self-diagnosing electronic sensors. The computerized system senses operating conditions and power requirements and adjusts engine for peak performance and most efficient operation at all times.

**Design.** Caterpillar® designed one-piece cast iron block provides maximum strength and durability. Two-piece articulated pistons with forged steel crowns are designed to withstand higher cylinder pressure.

**EPA Compliant.** The Cat C18 Engine with ACERT™ technology is compliant with U.S. Environmental Protection Agency Tier 3 Emission Standards.
Mechanical Power Train. The Cat mechanical drive power train and power shift transmission provide unmatched operating efficiency and control on steep grades, in poor underfoot conditions, and on haul roads and drives with high rolling resistance.

1) Transmission. The Cat seven-speed planetary power shift transmission is matched with the direct-injection C18 engine with ACERT™ technology to deliver constant power over a wide range of operating speeds.

Robust Design. Designed for rugged underground mining conditions, the proven planetary power shift transmission is built for long life between overhauls.

2) Lock Up Torque Convertor. Combines maximum rimpull and cushioned shifting of torque converter drive with the efficiency and performance of direct drive. When engaged, lock-up provides superior power train efficiency by delivering more power to the wheels.

Lock-Up Clutch. Quickly releases and re-engages to reduce power train torque loads for smoother shifting, long life and a more comfortable ride.

Smooth Shifting. Individual clutch modulation provides smooth clutch engagements to optimize performance and extend clutch life.

3) Final Drives. Cat final drives work as a system with the planetary power shift transmission to deliver maximum power to the ground. Built to withstand the forces of high torque and impact loads, final drives provide high torque multiplication to further reduce drive train stress.

Full Floating Axles. Full floating axles relieve internal stresses and increase durability. Rolled splines also provide increased service life.
Engine/Power Train Integration
Electronically combines critical power train components to work more intelligently and optimize overall truck performance.

- **Cat Data Link.** Electronically integrates machine computer systems to optimize overall power train performance, increase reliability and component life, and reduce operating costs.

- **Controlled Throttle Shifting.** Regulates engine RPM during shifting to reduce power train stress and clutch wear by controlling engine speed, torque converter lock-up and transmission clutch engagement for smoother shifts and longer component life.

- **Economy Shift Mode.** Reduces engine speeds, resulting in decreased fuel consumption, lower noise levels and potentially longer engine life.

- **Directional Shift Management.** Regulates engine speed during directional shifts to prevent damage caused by high speed directional changes.

- **Body-up Shift Inhibitor.** Prevents the transmission from shifting above a pre-programmed gear without the body fully lowered.

**Electronic Technician (Cat ET).** Cat ET service tool provides service technicians with easy access to stored diagnostic data through Cat Data Link to simplify problem diagnosis and increase availability.

**Diagnostic Capability.** Critical data from the electronic engine and transmission controls, including transmission shifting, engine speed and fuel consumption, provides service technicians with enhanced diagnostic capability to reduce downtime and operating costs.

**Overspeed Protection.** The transmission control electronically senses engine conditions and automatically up-shifts one gear to prevent overspeeding. If overspeeding occurs in top gear, the lock-up clutch is disengaged.
Caterpillar Brake System

*Reliable braking with superior control gives the operator the confidence to focus on productivity.*

**Integrated Braking System.** The Cat oil-cooled braking system delivers reliable performance and control in the most extreme underground mining conditions. The integrated system combines the service, secondary, parking brake and retarding functions in the same robust system for optimum braking efficiency.

**Oil-Cooled Multiple Disc Brakes.** Caterpillar four-wheel, forced oil-cooled, multiple disc service brakes are continuously cooled by a water-to-oil heat exchanger for exceptional, non-fade braking and retarding performance.

**Brake Design.** Cat oil-cooled disc brakes are designed with large discs and plates for reliable, adjustment-free operation and performance. Brakes are completely enclosed and sealed to prevent contamination and reduce maintenance.

**Long Life.** An oil film prevents direct contact between the discs. This design absorbs the braking forces by shearing the oil molecules and carrying heat away to extend brake life.

**Automatic Retarder Control (ARC).** Electronically controls retarding on grade to maintain optimum engine rpm and oil cooling. Additional braking may be applied using the manual retarder or the brake pedal.

**Faster Speeds.** ARC allows the operator to maintain optimum engine speeds for faster downhill hauls and greater productivity.

**Superior Control.** Automatic brake modulation offers a smoother ride and better control in slippery conditions, allowing the operator to concentrate on driving.

**Ease of Operation.** ARC increases operating ease, resulting in greater operator confidence with less fatigue.

**Engine Overspeed Protection.** Automatically activates ARC when engine speed exceeds factory preset levels, regardless of operator inputs, to avoid potentially damaging engine overspeeds.

**Fuel Efficiency.** The engine provides additional retarding by running against compression on downhill hauls. During retarding applications the engine ECM reduces fuel injection to minimum value or exceptional fuel economy.
**Operator’s Station**

Ergonomically designed for operator comfort, superior control and high productivity.

---

**Ergonomic Layout.** The AD45B operator station is ergonomically designed for total machine control in a comfortable, productive and safe environment. All controls, levers switches and gauges are positioned to maximize productivity and minimize operator fatigue.

**Protective Structure.** Integral to the cab and frame, both the Rollover Protective Structure (ROPS) and Falling Objects Protective Structure (FOPS) are resiliently mounted to the mainframe to isolate the operator from vibration for a more comfortable ride.

**Optional Enclosed Cab.** Optional sound-suppressed ROPS cab provides a quiet, secure working environment. Enclosed design provides fresh, pressurized, temperature-controlled air circulation with air-conditioned comfort and a more comfortable working environment.

**Suspension Seat.** Ergonomically designed, fully adjustable suspension seat with adjustable armrests provide optimal operator comfort. Thick cushions reduce pressure on lower back and thighs. Wide, retractable seat belts provide a secure, comfortable restraint.

**Steering Column.** Comfort wheel with tilt steering provides a comfortable driving position, secure grip and greater control.

**Monitoring System.** Caterpillar Electronic Monitoring System (CEMS) continuously provides critical machine data to keep the machine performing at top production levels. Displays are backlit for easy viewing.

- **Gauge Cluster.** Maintains a constant display of vital machine functions, including: engine coolant temperature, brake oil temperature, engine oil pressure and fuel level.
- **Speedometer/Tachometer Module.** Monitors three systems: engine speed, ground speed and gear indicator.
- **Message Center.** The Caterpillar Electronic Monitoring System (CEMS) includes 4 warning categories and provides visual and audible warning system outputs to alert operators of abnormal machine health conditions.

**Interlock.** If the operator fails to apply the park brake prior to exiting the cab, the interlock system will detect the absence of operator input and apply the park brake, neutralize the steering, implements and transmission and command the engine ECM to shut down the engine.
Truck Body Systems
Cat designed and built for rugged performance and reliability in tough underground mining applications.

Cat Truck Bodies. Caterpillar offers two specific body styles for the most efficient hauling solutions at the lowest cost-per-ton.

- Dump Body
- Ejector Body

The ejector body can now be easily removed and a dump body fitted for greater machine versatility.

Body Selection. Selection of the right body depends on material, haul road, and dump conditions. The better the match of body to application, the greater the efficiency. Your Cat dealer can help you select the right body system for your site specific application.

Body Design. Cat truck bodies are designed for optimal strength, capacity and durability. With improved design and the use of Hardox steel, longer service life and lower cost per ton figures are now evident.

Body/Chassis Integration. Caterpillar truck bodies are designed and matched with the integrated chassis system for optimum structural reliability, durability and long life.

Fast Hoist Cycle Times. Single-stage hoist cylinders provide fast dump cycle times of 16 seconds for raise and 21 seconds for lower.

Load Carrying Capacity. Large target area provides high load carrying capacity. Its diverging flow design gives clean load ejection, which maximizes production and avoids material carryback.

Truck Payload Management System (TPMS). The optional TPMS system calculates the payload the truck is carrying and determines truck cycle times.

Ejector Body. The ejector body offers clean load ejection and the capability to work in areas with restricted overhead clearance and soft underfoot conditions.
Frame Design. The frame incorporates a box-section design with wide and stiff frame beams to handle torque loads. The frame design decreases stress in the hitch area and optimizes suspension geometry. Materials and weld joints are matched to optimize the life of the structure.

Articulating/Oscillating Hitch. The articulating hitch provides the truck with steering articulation and the oscillation ensures the truck maintains all wheel ground contact in rough terrain. Hardened steel pins, taper roller bearings and oscillating stops allows the rear frame to move independently from the front frame.

Suspension System. The suspension system is designed to dissipate haul road and loading impacts for longer frame life.

Suspension Cylinders. Two independent variable rebound suspension cylinders absorb shocks before forces get to the mainframe for longer frame life and a more comfortable ride.

Structures
Rugged Cat structures are the backbone of the AD45B underground mining truck’s durability.
Serviceability

Less time spent on maintenance means more time on the haul roads.

Service Access. Easy access to daily service points simplifies servicing and reduces time spent on regular maintenance procedures.

Ground-Level Access. Allows convenient servicing to tanks, filters, lubrication points and compartment drains.

Diagnostics. Electronic control system enables quick diagnosis of engine conditions and effective maintenance and repairs utilizing the Cat Electronic Technician (Cat ET) Service Tool.

Air Filters. Radial seal air filters are easy to change, reducing time required for air filter maintenance.

Sight Gauges. Makes fluid level checks quick and easy. These include the hydraulic, transmission and coolant reservoirs.

Sealed Electrical Connectors. Electrical connectors are sealed to lock out dust and moisture. Harnesses are covered for protection. Wires are color and number coded for easy diagnosis and repair.

Scheduled Oil Sampling. S•O•S™ sampling valves speed sampling and analysis reliability.
Commitment Makes the Difference. Cat dealers offer a wide range of solutions, services and products that help you lower costs, enhance productivity and manage your operation more efficiently. Support goes far beyond parts and service. From the time you select a piece of Cat equipment until the day you rebuild, trade or sell it, the support you get from your Cat dealer makes the difference that counts.

Dealer Capability. Cat dealers will provide the level of support you need, on a global scale. Dealer expert technicians have the knowledge, experience, training and tooling necessary to handle your repair and maintenance needs, when and where you need them.

Product Support. Cat dealers believe superior products deserve superior support. When Cat products reach the field, they are supported by a worldwide network of parts distribution facilities, dealer service centers, and technical training facilities to keep your equipment up and running. Cat customers rely on prompt, dependable parts availability and expertise through our global dealer network, ready to meet your needs 24/7.

Service Support. Every piece of Cat equipment is designed and built to provide maximum productivity and operating economy throughout its working life. Cat dealers offer a wide range of service plans that will maximize uptime and return on your investment, including:

- Preventive Maintenance Programs
- Diagnostic Programs, such as Scheduled Oil Sampling and Technical Analysis
- Rebuild and Reman Options
- Customer Support Agreements

Technology Products. Cat dealers offer a range of advanced technology products designed to improve fleet efficiency, increase productivity, and lower costs.

**Product Safety.** Caterpillar has been and continues to be proactive in developing mining machines that meet or exceed safety standards. Safety is an integral part of all machine and systems designs.

**Engine Shutoff Switch.** A secondary engine shutoff switch is located at ground level.

**Integral ROPS Cab.** Integral to the cab and frame, the ROPS is resiliently mounted to the frame to isolate the operator from vibration for a more comfortable ride.

**Brake Systems.** Four corner oil-cooled braking system provides excellent control. The service brakes and retarding system are actuated by modulated hydraulic pressure, while the parking brake function is spring applied and hydraulic released. This system assures braking in the event of loss of hydraulic pressure.

**Interlock.** If the operator fails to apply the park brake prior to exiting the cab, the interlock system will detect the absence of operator input and apply the park brake, neutralize the steering, implements and transmission and command the engine ECM to shut down.

**Standard Safety Features.**

- Anti-Skid upper deck surfaces
- Upper deck handrails
- 3-point cabin and machine access
- Push out safety glass
- Excellent visibility
- Suspension seat
- Passenger/training seat
- Inertia reel retractable belts
- Steering frame lock
- Rear window guard
- Integrated fire suppression system
- Body retaining pins
- Automatic retarder control
- Exhaust heat shielding and firewall fitted standard
- Hitch hydraulic hoses – burst protection sleeves fitted
- Tailgate retaining pins (ejector body)
- Alternate exit via windows
- Ground level compartment sight glasses
- Hot and cold side of engine

AD45B Underground Articulated Truck specifications
Gradeability/Speed/Rimpull

To determine gradeability performance: Read from gross weight down to the percent of total resistance. Total resistance equals actual percent grade plus rolling resistance as a general guide use 2% for rolling resistance in underground application or refer to the Cat Performance Handbook. From the total resistance point, read horizontally to the curve with the highest obtainable gear, then down to maximum speed. Usable rimpull will depend upon traction available and weight on drive wheels.

1A – 1st Gear Torque Convertor Drive
1B – 1st Gear Direct Drive
2 – 2nd Gear Direct Drive
3 – 3rd Gear Direct Drive
4 – 4th Gear Direct Drive
5 – 5th Gear Direct Drive
6 – 6th Gear Direct Drive
7 – 7th Gear Direct Drive

E – Empty 40 000 kg (88,185 lb)
L – Loaded 85 000 kg (187,393 lb)
Standard Equipment

Standard equipment may vary. Consult your Caterpillar dealer for details.

POWER TRAIN
- 6 cylinder C18 ACERT™ ATAAC diesel engine
- Long life coolant
- Automatic retarder control
- All wheel disc brakes (oil cooled)
- Parking brakes (four wheels)
- Autoshift transmission 7 speed forward/2 speed reverse
- Torque converter with automatic lockup
- Control throttle shifting
- Programmable ground speed limiting
- Programmable gear blockout with tray up
- Engine air intake pre cleaner
- Four wheel drive

OTHER STANDARD EQUIPMENT
- Belly guards
- 29.5 × R29 VSNT radial tires
- Front and rear tow pin
- Articulated and oscillated hitch
- Exhaust catalytic converter/muffler
- Tray-up alarm
- Centralized lubrication points
- Frame lifting lugs
- Exhaust covers
- Dump body (21.3 m³, 27.9 yd³)
- Firewall
- Front axle suspension
- Front rubber bumpers

ELECTRICAL
- Alternator, 95 amp
- Reversing alarm
- Reversing lights
- Headlights with dimmer switch
- Rear work light (cab mounted)
- Caterpillar electronic monitoring system (CEMS)
- Ground level disconnect switch (2 post)
- Jump start receptacle
- Brake and tail light
- Ground level shutdown switch
- Corrosive protection spray
- 24v electric starting

OPERATOR ENVIRONMENT
- Open ROPS/FOPS operator station
- Suspension operator seat with retractable seat belt
- Tilt/telescopic steering wheel
- Rear view mirrors
- Trainer/passenger seat and seat belt
- Interlock system includes ABA
